

Mobile Phones in the Workplace

Clearline Communications, the Sheffield based telecoms company, has added Kirk Telecoms professional wireless range to its portfolio. Partnering with Distributor ICON, Clearline are able to deliver KIRK solutions into sectors as varied as heavy industry, hotels and schools.

Donald Whittaker MD of Clearline said that the KIRK wireless telephone solutions meant that Clearline could now meet the demand from its customers for mobile communications in the workplace. With a KIRK wireless telephone you don't have to sit at your desk or in your office to do business. Colleagues and customers can contact you wherever you are on the site and with the text facility key personnel can be silently alerted to deal with emergencies or called to meetings without interruption to others.

Used by teachers, vehicle service engineers, production engineers and office staff the Kirk handsets are stylish but rugged. The handset range have feature benefits for all industries, including; Vibration alert, water splash resistance, dust protection and the 4000 series is built specifically for application in hazardous industrial environments.

The phones have a talk time of 16 hours and a standby time of 150 hours. This is useful for professions such as teaching,

where the employee needs access to communications but is mobile and away from their desk for the whole of the working day. With lone worker, man down alarm, and a 64 name and number memory the KIRK system provide lone workers and mobile staff with the extra support they need wherever they are on the site – indoors or outdoors. The system will also integrate with alarm systems and send text messages alerts to nominated handsets.

Donald was quick to explain that you do not need to change your telephone system to benefit from the KIRK phones. The system adds to any existing telephone system and enables customers to lever more benefits from their original telecoms investment.

The KIRK wireless system provides unique benefits for every sector and with a range of installations across the UK Clearline and its distribution partner ICON are able to demonstrate the benefits a KIRK system can add in any application.

Donald is convinced that the KIRK wireless system can bring substantial benefits to all types of organisations no matter whether they are involved in engineering, education, commerce or even leisure and he challenges companies to contact him to see for themselves the KIRK system in operation.

Making the right connections...
