The new Polycom KWS6000 dramatically lowers the cost of wireless VoIP

St Albans, UK, 8 October 2008: ICON the UK distributor of Polycom KIRK solutions confirmed today that it is taking orders from its Channel Partners for the new Polycom KIRK Wireless Server 6000 (KWS6000).

Highly scalable from 1 to over 4000 handsets The KWS6000 is an easy to install wireless handset solution for the SME, large enterprise, or campus style organisation.

The KWS6000 provides a robust and reliable alternative to deploying a Wi-Fi handset solution. It supports up to 4096 handsets and allows up to 1024 simultaneous conversations.

Mark Shane, sales manager for ICON, commented.

“The KWS6000 dramatically lowers the cost of deploying a wireless handset solution in an organisation and offers an extremely robust and reliable solution for a company wanting to use wireless handsets with a VoIP telephone system. It is easy to install and maintain but if a channel partner needs help, provided that the kit was supplied by us, they will qualify for free technical and solution support.”

The KWS6000,

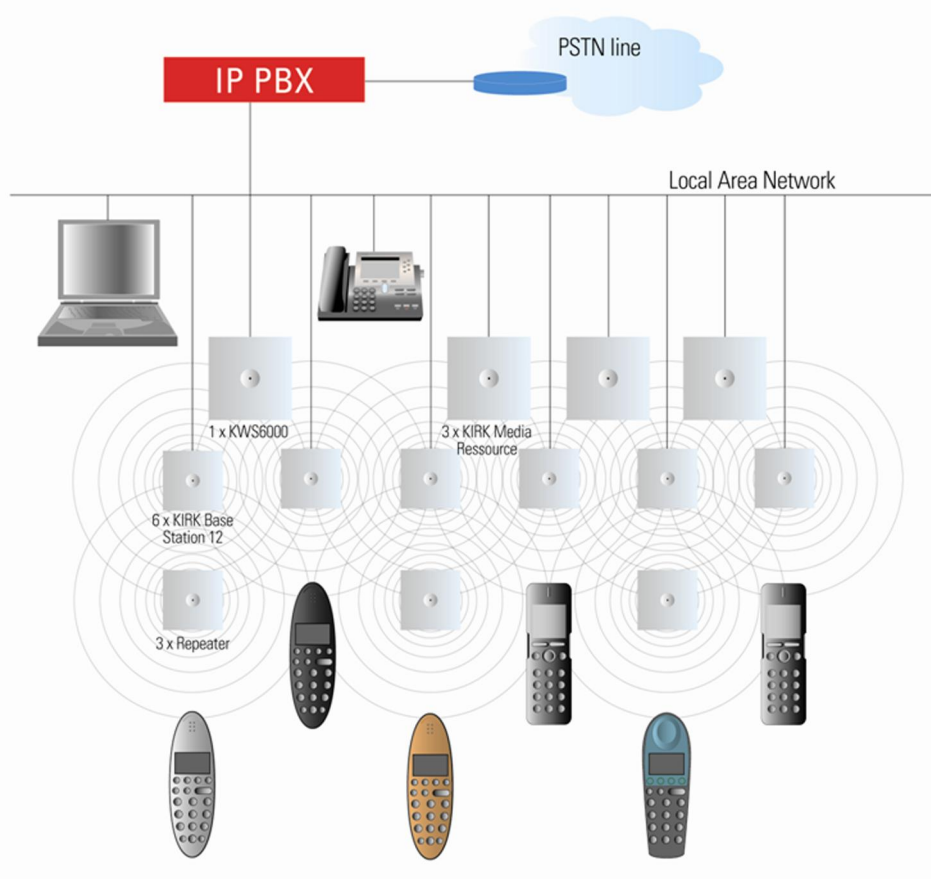

- Can be used in a hosted or CPE environment
- Can provide a telephone solution for a satellite office
- Works with all KIRK enterprise quality handsets
- Provides the flexibility to cope with complex coverage requirements
- Works on existing LAN infrastructure
- Can be configured via a browser

The KWS6000 can be used on the existing LAN network and infrastructure. Deployment should not require the installation of major infrastructure wiring unless a new LAN is being installed. Companies with a number of small offices can provide mobility benefits at every office with minimal capital investment by deploying a KWS 6000 solution at each location and arranging for call handling to be managed by a local or centralised IP SIP PBX.
