A low cost IP solution for an SME wanting to give employees wireless handsets.

St Albans, UK, 7 July 2008: ICON the UK distributor of Polycom KIRK solutions confirmed today that the KIRK Wireless Server 300 is now available in the UK.

The KWS300 provides a low cost solution for an SME wanting to give up to 12 employees wireless handsets. The KWS300 is the entry level wireless VoIP telephony solution and provides a robust and reliable alternative to deploying a Wi-Fi handset solution. It is suited to organisations needing to provide employees with business and mission critical on-site mobile speech and message services around a small to medium sized site or department. It supports up to 12 handsets, allows 4 simultaneous conversations.

Mark Shane, sales manager for ICON, commented.

“The KWS300 offers an extremely low cost solution for a company wanting to deploy a mobility solution on a VoIP telephone system. They are easy to install and maintain but if a reseller needs help, provided that the KWS300 was supplied by us, the reseller will be able to use the free technical and solution support provided by ICON.”

The KIRK Wireless Server 300,

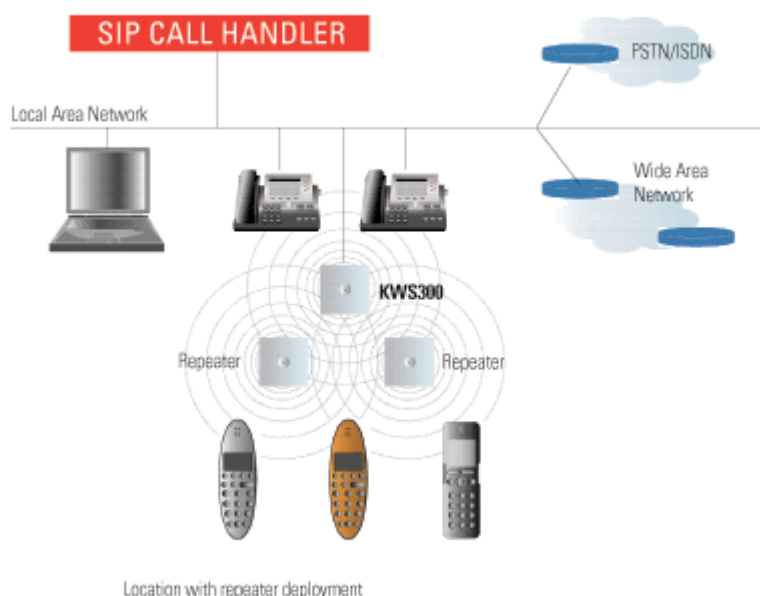

- Can be used in a hosted or CPE environment
- Can provide a telephone solution for a satellite office
- Works with all KIRK enterprise quality handsets
- Provides the flexibility to cope with complex coverage requirements
- Eliminates the need for non-standard infrastructure cabling
- Does not need external power supplies – it uses PoE
- Can be configured via a browser

The KWS300 can be used on the existing LAN network, infrastructure and components. Deployment should not require the installation of major infrastructure wiring unless a new LAN is being installed. Companies with a number of small offices can provide mobility benefits at every office with minimal capital investment by deploying a KWS300 solution at each location and arranging for call handling to be managed by a local or centralised IP SIP PBX.
